

Here are three beginner-friendly projects that reinforce the HTML tags you've covered:

---

### Project 1: Personal Profile Page

✂ **Concepts Covered:** Heading tags, paragraphs, images, bold/italic text, links, divs, meta tags, and comments.

#### Description

Create a simple personal profile page that introduces a person (could be a student, a famous person, or a fictional character). The page should include:

- A title and description using **meta tags**.
- A heading with the person's name.
- A paragraph with a brief bio.
- An image of the person.
- Some text in **bold** or *italics* for emphasis.
- A link to their "social media" (could be a placeholder like #).
- A **div** to wrap content neatly.
- **HTML comments** to explain sections of the code.

📌 **Bonus:** Use **superscript** for something like "Born in 1990<sup>2</sup>", and **subscript** for chemical formulas in their interests (e.g., "H<sub>2</sub>O lover").

---

### Project 2: Simple Blog Post Page

✂ **Concepts Covered:** Headings, paragraphs, line breaks, horizontal lines, text formatting (bold, italics, underline, strikethrough, inserted, deleted), meta tags.

#### Description

Create a simple blog post page that has:

- A **heading** for the blog title.
- A short **meta description** about the blog.
- A **paragraph** for the blog post.
- Proper use of **line breaks** (<br> for readability.
- A **horizontal rule** (<hr>) to separate sections.
- Text formatting:

- **Bold** for important words.
- *Italics* for quotes.
- ~~Strikethrough~~ for corrections.
- `<ins>` for newly added updates.
- `<del>` for deleted text.

📌 **Bonus:** Add a **footer section** inside a **div** with the author's name and a copyright notice.

---

### Project 3: Favorite Places Webpage

✂ **Concepts Covered:** Headings, paragraphs, images, anchor tags, href, centering content, div tags, nested elements, meta tags.

#### Description

Create a simple webpage showcasing three favorite places (cities, tourist attractions, or restaurants).

- A **meta tag** for keywords like “travel, places, tourism”.
- A **heading** for each place.
- A **paragraph** describing each place.
- An **image** of each place.
- A **link** to an external website about the place using `<a href="...">`.
- A **div** to wrap each place’s content neatly.
- Use **centering** to align images and headings.
- A **horizontal line** (`<hr>`) between places for clarity.

📌 **Bonus:** Add **nested elements**, like an `<em>` inside a `<p>`, or a `<strong>` inside an `<h2>`.

---

These projects reinforce key HTML concepts and prepare students for more advanced topics like CSS. Would you like me to provide sample code for any of them?
